## Calculated Analytical Measures Coverage

As a general note, product generates three versions of every measure – the base (of non-prefixed) version, the “Fair” of theoretical version, and the “market” version. Further, if the market version is available, the base defaults to that version; otherwise, it defaults to the “fair” version.

Exact measure names are given in the columns below – these names are to be used exactly as listed when querying for a given measure for any purpose (including measure based calibration).
